

We now live in a world that is more connected than ever before. The Internet touches almost all aspects of everyone's daily life, whether we realize it or not. Recognizing the importance of cybersecurity to our nation, President Obama designated October as **National Cyber Security Awareness Month**. National Cyber Security Awareness Month is designed to engage and educate public and private sector partners through events and initiatives with the goal of raising awareness about cybersecurity and increasing the resiliency of the nation in the event of a cyber incident.

National Cyber Security Awareness Month

STOP. THINK. CONNECT.

KEEP A CLEAN MACHINE

- KEEP SECURITY SOFTWARE CURRENT: Having the latest security software, web browser, and operating system are the best defenses against viruses, malware, and other online threats.
- AUTOMATE SOFTWARE UPDATES: Many software programs will automatically connect and update to defend against known risks. Turn on automatic updates if that's an available option.
- PROTECT ALL DEVICES THAT CONNECT TO THE INTERNET: Along with computers, smart phones, gaming systems, and other web-enabled devices also need protection from viruses and malware.
- PLUG & SCAN: USBs and other external devices can be infected by viruses and malware. Use your security software to scan them.

PROTECT YOUR PERSONAL INFORMATION

- SECURE YOUR ACCOUNTS: Ask for protection beyond passwords. Many account providers now offer additional ways for you verify who you are before you conduct business on that site.
- MAKE PASSWORDS LONG AND STRONG: Combine capital and lowercase letters with numbers and symbols to create a more secure password.

Be a Good Online

Citizen

- **Safer for me, more secure for all:** What you do online has the potential to affect everyone – at home, at work and around the world. Practicing good online habits benefits the global digital community.
- **Post only about others as you have them post about you.**

- **UNIQUE ACCOUNT, UNIQUE PASSWORD:** Separate passwords for every account helps to thwart cybercriminals.
- **WRITE IT DOWN AND KEEP IT SAFE:** Everyone can forget a password. Keep a list that's stored in a safe, secure place away from your computer.
- **OWN YOUR ONLINE PRESENCE:** Set the privacy and security settings on websites to your comfort level for information sharing. It's ok to limit how and with whom you share information

CONNECT WITH CARE

- **WHEN IN DOUBT THROW IT OUT:** Links in email, tweets, posts, and online advertising are often the way cybercriminals compromise your computer. If it looks suspicious, even if you know the source, it's best to delete or if appropriate, mark as junk email.
- **GET SAVVY ABOUT WI-FI HOTSPOTS:** Limit the type of business you conduct and adjust the security settings on your device to limit who can access your machine.
- **PROTECT YOUR \$\$:** When banking and shopping, check to be sure the site is security enabled. Look for web addresses with "https://," which means the site takes extra measures to help secure your information. "Http://" is not secure.

Help the authorities fight cybercrime:

Report stolen finances, identities and cybercrime to:

<http://www.ic3.gov> (the Internet Crime Complaint Center)

<http://www.onguardonline.gov/file-complaint> (the FTC).
